## TITAN NEEDLE ROLLER ROCKER ASSEMBLY

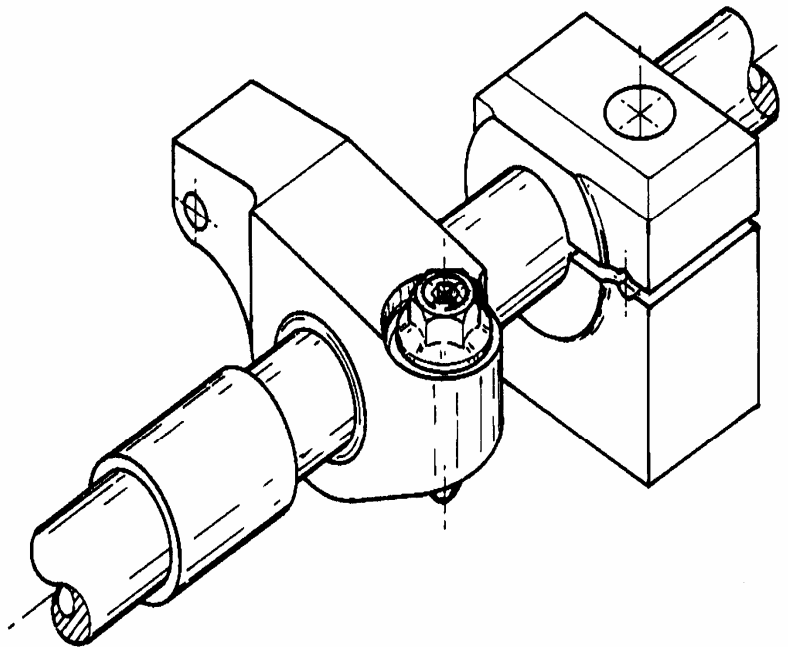

Before fitting, completely undo all tappet screws to minimise bending of hardened steel shaft. Ensure that posts, spacers and rockers are evenly distributed along the length of the shaft so that all rockers are free to pivot.

On no account must the springs be allowed to become coil-bound as this will place undue stress on the rocker and could lead to failure.

When fitting either the standard or high lift ratio assemblies, it may be necessary to open out the push rod holes to give additional clearance.

***The following torque figures must be observed:-***

Rocker Pillar Bolts:-	26 - 28lbs. ft.	(3.6 - 3.9 Kg.m.)
Tappet Adjusting Nuts:-	15 - 18lbs. ft.	(2.1 - 2.5 Kg.m.)
